PROFESSIONAL SUMMARY

AI and full-stack developer with 1.5+ years of professional experience across web, mobile, AI and automation work. Built DeepShield, a full-stack deepfake and AI-image detection system with explainable heatmaps, a role-based admin dashboard and verifiable PDF reports. At Axelliant, engineered Playwright and Cypress automation with GitHub Actions pipelines that cut full testing cycles from 2-3 days to about 2 hours. Shipped production software for international clients in real estate, healthcare and e-commerce.

EXPERIENCE

Automation & CI/CD Engineer

May 2025 – Feb 2026

Axelliant | Lahore, Pakistan

- Built end-to-end Playwright and Cypress automation frameworks for hybrid systems, reducing full testing cycles from 2-3 days to approximately 2 hours.
- Engineered CI/CD pipelines with GitHub Actions using parallelized workflows, shortening feedback loops across development and release pipelines.
- Collaborated with dev and product teams to maintain stable builds, streamlining test orchestration and reducing repetitive manual validation.

Software Engineer

Jun 2024 – Oct 2024

Ashtex Solutions | Lahore, Pakistan

- Developed and shipped client-facing web application features using React and supporting automation tooling across multiple software projects.
- Owned sprint planning and task tracking for the development team, keeping documentation and release notes current across every deployment.
- Ran QA checks against each feature before release, catching regressions early and keeping delivery aligned with sprint timelines.

Software Engineer Trainee

Jun 2023 – Aug 2023

Arrivy | Pakistan

- Led QA activities for an employee management system and an automation tool, with both products progressing to active production use.
- Collaborated within a 7-member cross-functional intern team spanning development, testing, and delivery responsibilities.

PROJECTS

DeepShield | FastAPI, PyTorch, OpenCV, Hugging Face, Flutter, React/TypeScript, Supabase, Hardhat

- Built a full-stack forensic media system: a FastAPI/PyTorch inference backend, a Flutter user app, and a React/TypeScript admin dashboard with role-based access (admin, investigator, viewer) and audit logs.
- Kept two detection signals separate: a UCF dual-encoder with Xception frame-level evidence for manipulation, and a Hugging Face Vision Transformer for AI-generated images, with Grad-CAM++ heatmaps and four confidence bands.
- Added SHA-256 duplicate detection, Supabase auth and storage, background PDF reports with QR verification, and report-hash anchoring on a local Hardhat chain.

BudgetBuddy | React, Node.js, Express, MongoDB, JWT

- Built a multi-user budgeting app with JWT-protected routes, category-based expense tracking, spending-trend charts, and shared family budgets with member management.

Arabia Hills | React, Supabase

- Engineered a real estate management platform for a UAE client supporting 20+ property listings with sub-second data retrieval, and automated bulk property data uploads.

WePsych | Flutter, Dart, Supabase

- Developed a cross-platform psychiatric law and practice application for an Austrian client, reducing administrative overhead by approximately 30%.

ALFA CLUB | React, Tailwind CSS, Cloudinary

- Built a responsive e-commerce storefront with a 90+ Lighthouse score while optimizing mobile checkout and media performance.

EDUCATION

Bachelor of Science in Computer Science

2026

National University of Computer & Emerging Sciences (FAST NUCES), Lahore, Pakistan

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Dart, SQL

AI & ML: PyTorch, OpenCV, Hugging Face Transformers, Grad-CAM++ explainability

Frontend & Mobile: React, Next.js, Tailwind CSS, Flutter, React Native

Backend & Data: Node.js, Express, FastAPI, REST APIs, Supabase, PostgreSQL, MongoDB

Automation & DevOps: Playwright, Cypress, GitHub Actions, CI/CD, Make.com, Git
